A Note from Wilfred Morgan

Most real estate investors I talk to are sitting on a problem they think is permanent: high-utilization personal credit card debt that tanks their score and blocks every funding conversation. They see it as something that has to be paid off before anything else can happen. That timeline is years away for most of them.

> "*The debt doesn't disappear. But it stops being visible to the lenders who matter. That's the entire game.*"

FCFM is the framework that changes that timeline. You relocate the debt — off your personal credit and onto business credit — and use the clean score that creates to fund your investing business. Same debt. Completely different financial reality.

This is Vol. 3 in the Credit Sculpt Series — the rescue volume, built for investors whose personal credit is the barrier between where they are and their next deal. Work the framework. Then bring us your file.

Wilfred Morgan

The Credit Sculpt Series

Three guides. One system. Built for real estate investors who need clean credit and business capital to execute on their next deal.

VOL. 1 — **Available Now**

RE Investor's Guide to Business Credit

The foundation. Understand how business credit is built separately from your personal file, why it matters for real estate investors, and the exact profile lenders want to see before approving significant funding.

VOL. 2 — **Available Now**

The Zero Percent Playbook

The strategy. Stack $50K–$150K+ in 0% APR business credit cards across multiple lenders in a coordinated application window. Target the right cards, in the right order, at the right time.

VOL. 3 — **You Are Here**

FCFM: Fix · Consolidate · Fund · Move

The rescue. High personal credit card debt destroying your score? FCFM legally relocates that debt off your personal credit report and onto business credit — without paying it off first. You're reading it now.

Before You Read This Playbook

FCFM (Fix-Consolidate-Fund-Move) is a process for relocating personal credit card debt off your personal credit report and onto business credit — legally, strategically, without paying off the debt first.

> *"The debt does not disappear. You still owe it. But it stops reporting to your personal credit file, stops tanking your score, and sits at 0% interest on business cards instead of 18–29% APR on personal ones."*

FCFM is not the only strategy available. Depending on your situation — credit score, debt load, income, business revenue — there may be better starting points. FCFM is the most powerful tool specifically for investors with high-utilization personal credit card debt that is killing their score and blocking their next deal.

FCFM IS:
- ✓ Strategic debt relocation
- ✓ Legal and repeatable
- ✓ A path to 720+ credit score
- ✓ 0% APR for 12–15 months
- ✓ A clean slate for your next deal

FCFM IS NOT:
- ✗ Debt elimination — you still owe it
- ✗ A get-out-of-debt-free card
- ✗ Available without a business entity
- ✗ A substitute for income or revenue
- ✗ A bypass for credit repair

The Optimal Credit Profile for Funding

Before you execute FCFM, know where you're starting from. These benchmarks are your target — not hard requirements.

720+

Credit Score

Maintain 720+ across all three bureaus. Best approval odds and highest credit limits.

0–9

Hard Inquiries

Max 3 inquiries per bureau in the last 6 months. Fewer is always better.

2+

Years Credit Age

Average account age of 2+ years with no derogatory marks — no late pays, no collections.

5+

Primary Accounts

Reporting to all 3 bureaus. Healthy mix of revolving and installment accounts.

IMPORTANT

This is the optimal profile — not a hard requirement. You can execute FCFM with scores in the 680–720 range. The closer you are to these benchmarks, the more funding you'll secure and the better the terms.

STEP 1 OF 4

FIX

Remove every negative mark from your credit report.

Utilization comes later. Derogatories come first.

Step 1: Fix Your Credit Report

Fix your credit report first. Remove every negative mark except utilization. We handle utilization differently in Step 2. Right now, focus exclusively on the items below.

What Counts as a Negative Mark

- Late payments (30, 60, 90, 120+ days)
- Collections (medical, utility, credit card, personal loan)
- Charge-offs (open or closed)
- Public records (bankruptcies, judgments, tax liens)
- Repossessions
- Settled accounts reporting as "settled for less than full balance"

CRITICAL

Do NOT worry about utilization right now. Even if your cards are maxed to the ceiling, leave them alone. The entire point of FCFM is to handle utilization through consolidation, not by paying balances down. Fix the derogatories. Leave the balances exactly where they are.

Let Us Fix Your Credit For You →

GrowthWave CAPITAL

STEP 2 OF 4

CONSOLIDATE

Move your credit card debt into an installment loan. Your revolving utilization drops to 0% — without paying a dollar.

Step 2: Consolidate — Why It Works

Credit scoring models treat revolving debt and installment debt completely differently. A credit card at 80% utilization destroys your score. A personal loan for the exact same dollar amount barely moves the needle. Same debt. Different account type. Completely different scoring impact.

> "*By consolidating your credit card balances into an installment loan, you're not reducing your total debt. You're reclassifying it. Your revolving utilization drops to 0%. Your score jumps 50–150+ points.*"

The Transformation

BEFORE CONSOLIDATION	AFTER CONSOLIDATION
$30,000 in credit card debt	$0 in credit card debt
85% revolving utilization	0% revolving utilization
640 credit score	720–780+ credit score
$30,000 installment loan: —	$30,000 installment loan ✓
Total debt: $30,000	Total debt: $30,000 (unchanged)

Expected Impact: +50–150 credit score points within one reporting cycle (30 days). You are now in the funding zone.

GrowthWave CAPITAL

STEP 3 OF 4

FUND

Apply for 0% APR business credit cards.
Your clean score and zero utilization make you a premium applicant.

Step 3: Fund — The Card Lineup

With a clean report and 0% utilization, you are a premium applicant for 0% APR business credit. Target $50K–$150K+ across 4–6 cards applied within a 14-day window.

CARD	APR	LIMIT	BUREAU	NOTES
Chase Ink Biz Unlimited	12 mo	$10–30k	EX/EQ	Apply FIRST. 5/24 rule. Best opener.
Chase Ink Biz Preferred	12 mo	$10–30k	EX/EQ	100k pts bonus. Stack with Unlimited.
Amex Blue Biz Plus	12 mo	$10–50k	EX	Highest limits. No annual fee.
Capital One Spark Cash	12 mo	$10–25k	All 3	2% CB. Need 680+ all bureaus. Reports to personal.
Citi AA Business	12 mo	$10–25k	EX/EQ	65k miles. Strict underwriting.

Application cadence: 2–3 apps/week · 4–6 cards total · All within a 14-day window · Chase FIRST (5/24 rule)

Step 3: Fund — Which Cards to Prioritize

The entire point of FCFM is to move debt off your personal credit. If you use a business card that reports balances to personal bureaus, you defeat the purpose. Prioritize the cards that keep business and personal reporting separate.

Reporting Behavior by Issuer

✓ DO NOT REPORT TO PERSONAL	✗ REPORTS TO PERSONAL CREDIT
American Express (business)	Capital One (all cards)
Chase (business)	Discover (all cards)
Citi (business)	TD Bank (business)
US Bank (business)	Barclays (business)
Wells Fargo (business)	

KEY INSIGHT

Capital One pulls all 3 bureaus AND reports business balances to personal credit. Approvals are useful, but be aware the balance will show on your personal report.

GrowthWave CAPITAL

STEP 4 OF 4

MOVE

Pay off the installment loan using your new business credit.

The debt is relocated. The framework is complete.

Step 4: Move — What Just Happened

Pay off the installment loan using business credit funds. Liquidate via balance transfers or 0% cash advances. The debt is relocated. Same dollar amount. Completely different financial reality.

The Complete FCFM Transformation

BEFORE FCFM	AFTER FCFM
✗ $30k+ personal CC debt	✓ $0 personal CC debt
✗ 80%+ revolving utilization	✓ 0% revolving utilization
✗ 620–680 credit score	✓ 720–780+ credit score
✗ 18–29% APR — compounding	✓ 0% APR for 12–15 months
✗ Debt destroying credit daily	✓ Debt invisible to personal credit
✗ Unfundable for anything	✓ Clean profile — fund again anytime
✗ Total debt: $30,000	✓ Total debt: $30,000 (unchanged)

The total amount of debt did not change by a single dollar. But it went from 18–29% APR crushing your credit every month to 0% APR invisible to your personal credit file. Same debt. Completely different financial reality.
